There are several adaptations which differ in land and water plants. Land plants have stronger root systems that aid in the anchorage of the plant as well as for the absorption of nutrients and water. In contrast, the water plants have weaker root systems which play a role only in the anchorage of the plant. In addition to this, the shoot system, the leaf anatomy and the reproduction strategies also change in water plants in comparison with land plants. This is the difference between land ...

Land plants are taller than they are wide. Aquatic plants have roots that hang into water. Each leaf has its own root. The leaves are thicker and somewhat spongy. There is no visible stem on the duckweed. What makes land plants better able to live on land? Branched roots hold the land plant in place and extend outward for water.
