Study Guide The Periodic Table

The periodic table helps predict some properties of the elements compared to each other. Atom size decreases as you move from left to right across the table and increases as you move down a column. The energy required to remove an electron from an atom increases as you move from left to right and decreases as you move down a column.

Periodic Table Study Guide - Introduction & History

The periodic table is based on atomic masses and similar properties. In each row, the atomic masses increase toward the right. Each column contains a group of elements with similar chemical behavior. In the modern periodic table, each box contains four data, as shown in Figure 1.

The periodic table is ordered in such a way that each element has one proton more than the element before it, and the mass is the sum of protons and neutrons in an atom. Electrons are negligible when calculating mass because they possess so little in comparison to the larger particles. 2 Think about outer shell electrons.

4 Ways to Study the Elements of the Periodic Table - wikiHow

Using the periodic table, how can you identify the number of electrons in an element? The number of electrons is always equal to the number of protons, which is the atomic number. List 3 ways that the periodic table is organized.

Periodic Table Study Guide Flashcards | Quizlet

The position of elements on the periodic table is directly related to their electron shells. Describe the relationship between group number and number of valence electrons the group number is how many valence electrons of that element are in each atom

Atoms and the Periodic Table Study Guide Flashcards | Quizlet

There only were 63 elements. Dmitri Mendeleev discovered a set of patterns that applied to all elements. He wrote the elements down on cards with the melting point, density, and color along with the element's atomic mass and number of chemical bonds it could form and arranged them in increasing atomic mass.

Science Chapter 3 Elements and the Periodic Table Study Guide

The periodic table is also split into four blocks: s = red, p = green, d = yellow, and f = blue. To further complicate your studies, the periodic table is also broken into four blocks. Check out the table above. Seriously, check it out. We'll wait. The first two columns (shown in red) comprise the s-block.
